

# ORANGE LOGIC

Studies have shown that in most homes and offices' chemical toxicity levels exceed the permitted standards and in many cases are up to 70 times higher than our external environment. When ingested, absorbed through the skin or inhaled these chemicals can cause a myriad of residual illnesses that often appear much later on after use.

When considering natural cleaning in your home or office you should be thinking orange. Triple Orange is a range of eco-friendly cleaning products that simplifies your life by providing you with a non-toxic solution to all your cleaning requirements.

Aside from the well known, therapeutic benefits of orange oil it is also an incredibly powerful solvent. Extracted from the peel of the sweet orange, orange oil breaks down grease naturally.

In developing the Triple Orange range, special attention has been given to simplifying usage, minimizing waste and harnessing the natural cleaning and degreasing power of Orange oil.

**Triple Orange products are pet and eco-friendly, have not been tested on animals, are biodegradable and formulated with, naturally derived ingredients that are hypo-allergenic and since oranges grow on trees are a renewable resource.**

## BIO DETERGENT

A laundry detergent (hot or cold wash) machine or hands wash. The combination of ingredients is gentle on your fabric; leave your clothing soft and smelling citrus fresh.

## WONDER GEL

A general purpose cleaning gel that will clean your entire office / home from windows to floors, dishes to showers. Highly concentrated, dilute it with water and one tub will last for ages –you'll love this economical aspect. Triple Orange Wonder Gel has real orange oil as its main ingredient, so the office/home will have that fresh orangey smell.

## WONDER SPRAY

A more concentrate version of Wonder Gel, but in a handy 500ml spray bottle so that it's always available for those accidental coffee spills, or when you only have 1 cup to wash. The possibilities are endless and now that you're not filling the basin with water for just a few items you're saving water too.

## Green Cleaning: By the Numbers

**17,000:** the number of petrochemicals available for home use, only 30 percent of which have been tested for exposure to human health and the environment.

**63:** the number of synthetic chemical products found in the average American home, translating to roughly 10 gallons of harmful chemicals.

**100:** the number of times higher that indoor air pollution levels can be above outdoor air pollution levels, according to US EPA estimates.

**275:** the number of active ingredients in antimicrobials that the EPA classifies as pesticides because they are designed to kill microbes.

**5 billion:** the number of pounds of chemicals that the institutional cleaning industry uses each year.

**23:** the average gallons of chemicals (that's 87 litres) that a janitor uses each year, 25 percent of which are hazardous.
